

Name _____

The Seasons

The earth orbits around the sun. It takes 365 days or one year to go completely around the sun. As the earth orbits the sun, sunlight hits the earth at different angles. This causes the seasons on earth. There are four seasons during the year: spring, summer, autumn and winter.

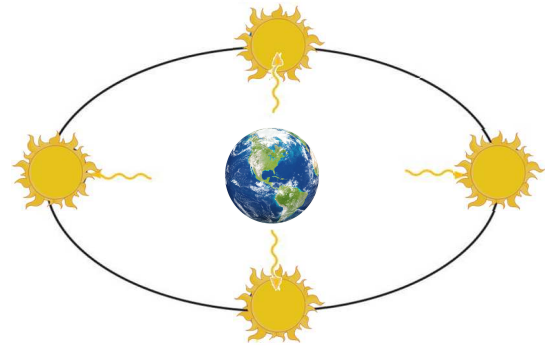

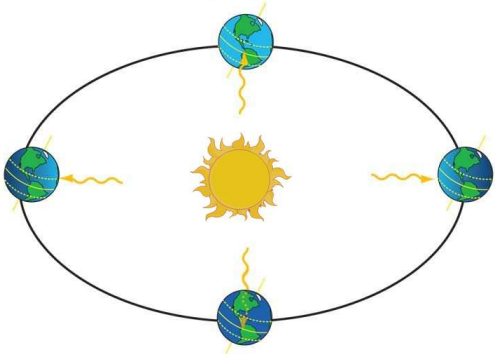

In spring, the weather is mild and rainy. In summer, the weather is warm and the days are longer than nights. In autumn, the weather is cool and rainy. In winter, the weather is cold and sometimes it snows. The days are shorter than the nights during winter.

1. Complete the sentence. Then, write the sentence below the correct diagram.

It takes the Earth _____ year to complete an orbit around the Sun.

2. Write the corresponding seasons under each picture. Circle the season with the longest nights.
