# Materials

The objects around us are made of different materials. These can be natural, such as wood, cotton, wool, clay and leather, or man made, such as paper, plastic, metal and glass.

Materials have certain properties. They can be tough, brittle, heavy, light, transparent, elastic or flexible. According to their properties, the materials have different uses. For example, cotton and wool are used to make clothes because they are materials that are tough, flexible and lightweight.

1. Find six materials. Then write each object under the material of which it is made. Circle objects made of natural materials.

m	g	b	r	l	q
e	e	g	o	e	n
t	l	l	s	a	p
a	a	a	e	t	a
l	w	s	c	h	p
t	o	s	s	e	e
w	o	o	d	r	r
l	l	c	x	w	p

2. From what materials are these objects made and why? Match the columns.

metal

plastic

leather

glass

flexible
