# Painter

The painter is the person who uses paints to color or protect all types of surfaces, such as the walls and ceilings of houses, buildings, schools, and machinery.

The painter uses brushes and rollers to apply the paint. He also uses spatulas and sandpaper to prepare the surfaces to be painted. Painters are contracted by the owners of houses and other buildings to add color and beauty to their walls and ceilings.

Painters also paint doors, windows, and furniture.

The painter wears overalls and a cap to protect himself from stains when he works. The painter will also cover his mouth and nose with a mask if he uses chemical products.
