

Name \_\_\_\_\_

Date \_\_\_\_\_

# Pilot

The pilot is the person who flies airplanes or helicopters. In larger airplanes, there are two pilots in the cabin. Their work is important because they are responsible for the lives of many people.

They usually work on airlines transporting passengers, but there are also pilots of aircrafts carrying cargo or mail and pilots of rescue helicopters.

They handle the controls of the aircraft, confirm the routes, check the weather before taking off, and communicate with the control tower during the flight.

Pilots can fly during the day or at night and can also train people on how to fly an airplane.

## ANSWER THE QUESTIONS.
