Plants

Plants are living things and, therefore, are born, grow, reproduce, and die. Plants need water, nutrients, light, and air to grow. Unlike animals, plants make their own food and do not move.

Plants are important to people and animals. They provide us food, such as fruits, vegetables, and seeds. From plants, we also receive wood, medicines, and textiles, such as cotton. Additionally, plants produce oxygen, which is necessary for the survival of all animals.

Circle the things plants need to grow.

light	lemonade
air	darkness
wind	sugar
water	nutrients

What is missing for the plants in the picture?

What things come from plants? Mark the correct pictures. Draw a picture of another product that plants give us in the last box.
