

Name \_\_\_\_\_

# Living and Non living

Living beings are those who are born, grow, reproduce and die, such as people, animals and plants. Living things need water, food, air, light and a suitable environment to survive.

Non living are those things that have no life, such as rocks and water. Non living things can be natural, like the air, or artificial, such as toys.

1. Find three living and three nonliving things. Write the words in the corresponding list. Circle non living things in the table.

## Living
