

Name _____

Date _____

Veterinarian

The veterinarian is the person who cares for the health of animals. Just as there is a doctor to cure people, there is also a veterinarian to prescribe medicines to heal sick animals, cure them if they are injured, or vaccinate them.

Veterinarians also teach animal owners how to care for and feed their pets.

Most veterinarians work in a veterinary hospital or clinic where they care for small animals, such as dogs or cats. They can also work on farms caring for larger animals such as cows and horses or even in zoos.

Veterinarians love animals and will do everything possible to make them happy.
