

Name _____

Parts of a Plant

Plants have three main parts: the roots, stem and leaves. The roots grow underground and secure the plant to the ground. They also absorb water and nutrients. The stem grows above the ground and distributes food throughout the plant. The leaves make food for the plant.

Additionally, some plants also have flowers and fruits. Flowers are the reproductive parts of the plant. From the flowers the fruits containing seeds are formed.

1. Rearrange the letters. Then label the parts of the plant.
