

Name \_\_\_\_\_

# Rocks

Rocks are natural, nonliving things. They consist of one or more minerals. They can be as big as boulders or as small as grains of sand.

There are many types of rocks. Depending on the minerals that compose the rock, they will have different properties, such as the color, shape and hardness of the rock.

Rocks have many uses. Some rocks are used to build buildings; others are used to make materials like glass and metal; and others are used as fuels.

## 1. Complete the table. Circle the rock that is used as fuel.

	color	forma	dureza
quartz 	transparent		
talcum 			soft
coal 		irregular	

## 2. Color the rocks in the drawing and everything that is made with rocks.
